\[
\frac{3}{5} \quad \frac{4}{10} \quad \frac{10}{19} = \frac{2}{x} \\
\sqrt{2} = \frac{a}{b} \quad (\sqrt{2})^2 = 2 \\
(\sqrt{2})^2 = 2 \\
\frac{a^2}{b^2} = 2 \quad a = 2 \times b \quad 2 \times x = 4 \times x^2 = 20 \quad 10 \\
4 \times x = 2 \times b^2 = 10 \times x = 5 \times b^2 = 10 \times b = 2 \times y \\
2 \times x = 5 \times b^2 = 10 \times b = 2 \times y \\
E = \Box \\
\]

P. Erdős \(\text{p.s. 1991 a.d.}\) explains to 
Laura Vassonji that \(\sqrt{2}\) is irrational.
